

**Strategic Policy Dd: Climate Change (Dd)**

The contribution that emissions of greenhouse gases from the National Park make to climate change will be reduced and the impacts of climate change on the National Park will be addressed in this Plan by:

- i. Ensuring that any coastal and flood protection works, including managed realignment, considered to be necessary have no adverse environmental impacts or that they can be satisfactorily mitigated.
- ii. Conserving and enhancing areas of woodland, upland soils and peatland areas to assist in carbon retention, water storage and flood prevention.
- iii. Facilitating species adaptation and migration through protecting habitat connectivity corridors and enhancing biodiversity.
- iv. Directing development to locations which reduces the need to travel, especially by private car.

This policy should not be read in isolation, it is important that the plan is read as a whole, many of the policies are inter-related and several policies may apply to one development proposal. Further information about this policy can be found on page 51 of the Eryri Local Development Plan.
